WEATHER OF CONCERN

Weather of Concern

- Red Flag Warning in effect for most of Modoc County on 08/23/18 from 1400-2000 hours for strong, gusty winds with low humidity.
- Many Southern California inland areas will start to see some drier weather come into the picture this week. This forecasted lower humidity along with some gusty winds will lead to an elevated fire threat.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

The atmospheric pattern will remain unsettled for the next several days. Another Pacific trough is expected to "hang" around for several days. Winds will become gusty ahead of the trough approach, especially today through Saturday. Expect gusts up to 25 mph across the far north and east, especially favoring portions of Modoc and Siskiyou counties as well as areas along and east of the Cascade and Sierra Crest. The gustier wind will also be accompanied with low humidity, generally teens during the afternoon's. The Delta Region will also experience gusty winds during this period but humidity will be much higher. Humidity overall will trend higher in the coming days due to cooler temperatures and an overall modification of the airmass. Coastal areas will continue to experience higher humidity and periods of drizzle or light rain with the marine layer at least into the weekend. Temperatures should be near average for the time of year but could trend to below average readings by Sunday.

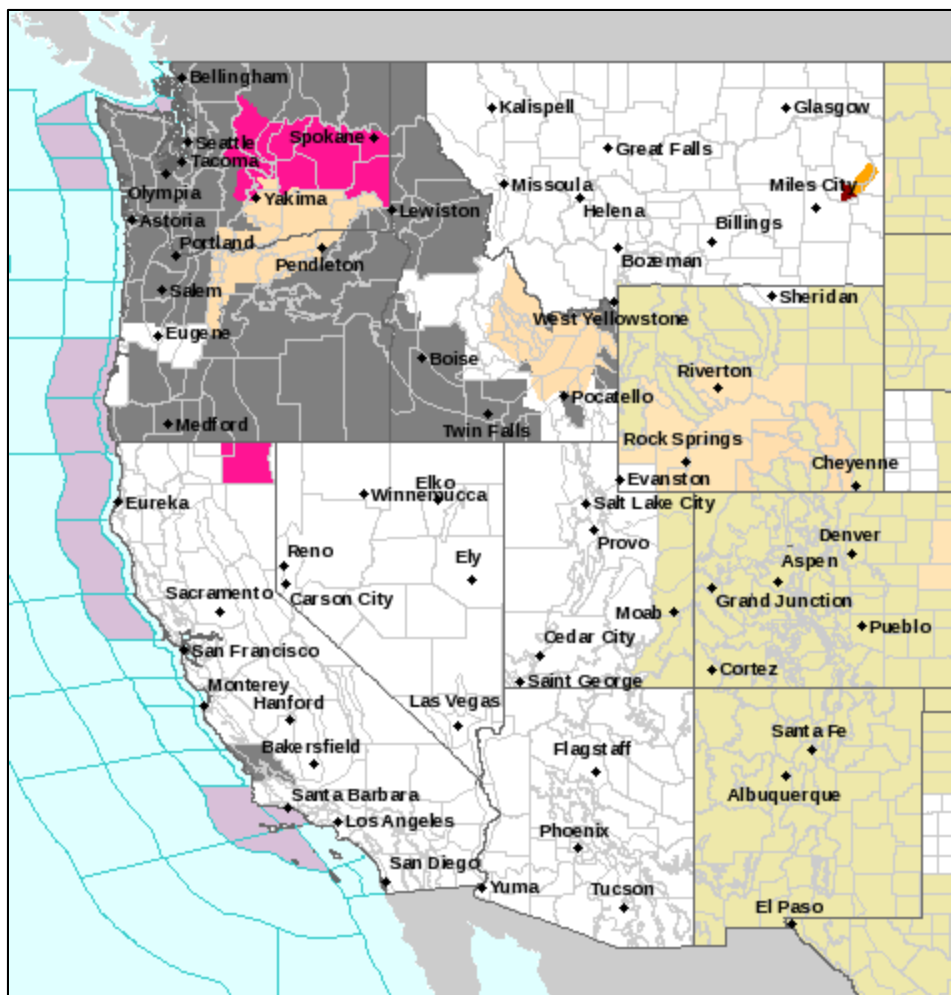

If the latest and past few days of weather modeling is correct, the trough should continue to have a presence over the region well into next week. This means continued cooler weather with the previous dominant high pressure remaining over the Desert SW and points east. Precipitation chances do not look to be very high during this period but the modeling could change and probably will. There will likely be periods of a little breezier wind next week.

SOUTHERN CALIFORNIA

A series of weak troughs over the Pacific Northwest and a ridge centered over the Southwest will wage a battle for hegemony of the district's weather over the next few days. Neither feature will move much, so day to day changes in the weather will be very minor through the first half of next week. Temperatures will remain a couple of degrees above normal due to warm sea surface temperatures and highs will be in the 70s and 80s in the mountains to the upper 90s in the San Joaquin Valley. Southwest winds of 15-25 mph will be possible in and near the desert Friday afternoon. Local north winds of 10-20 mph will be possible in Santa Barbara County and the I-5 Corridor tonight and again Sunday night. Widespread night through morning stratus can be expected which will penetrate far inland to reach the valleys each morning. Minimum relative humidity (RH) will reach the teens over the central coast interior and Sierras for 6-8 hours each afternoon. Similar RH readings will be possible in Southern California above the marine layer by the weekend. Some increase in smoke from fires to our north may cast a pall over afternoon skies beginning Friday. No thunderstorms are expected through the period.
